Want to become an Industrial Postdoc?

Shape your own unique career profile by combining research and business understanding! Application deadline 13 October 2011.

For researchers who have achieved a PhD degree within the last three years.

What is an Industrial Postdoc?

An industrial postdoc increases a researcher’s ability to work in different environments across different cultures. The idea is that an individual with a research background spends part of his/her time in a company and part at a research institution. The industrial postdoc thus helps strengthening the exchange of technology between companies and public sector research institutions.

- Project period at 1-3 years
- Participation of one company and one university
- All parties co-finance the salary for the industrial postdoc
